

Rare and Extirpated Biota and Natural Communities of Kentucky

May 2012

Abstract

The Kentucky State Nature Preserves Commission has updated and revised the lists of rare and extinct or extirpated biota. This is the most current list of statuses available and represents an updated version of the formal list last published in the Journal of the Kentucky Academy of Science in 2010. The list is based on a standard methodology now utilized by NatureServe. Natural communities have been included in this update. The newly revised lists include one lichen, 387 vascular plant and lesser taxa, 347 animal taxa, and 36 natural communities considered rare (Table 1). Twenty-one plant and 46 animal taxa are considered extirpated or extinct from Kentucky (Table 2).

¹ The US Status provided here refers to the current status of the taxon under the U.S. Endangered Species Act (USES) as interpreted for its range within the state of Kentucky.

Status Designations

(KSNPC) Kentucky State Nature Preserves Commission

Endangered (E). A taxon or natural community in danger of extirpation and/or extinction throughout all or a significant part of its range in Kentucky.

Threatened (T). A taxon or natural community likely to become endangered within the foreseeable future throughout all or a significant part of its range in Kentucky.

Special Concern (S). A taxon or natural community that should be monitored because (1) it exists in a limited geographic area in Kentucky, (2) it may become threatened or endangered due to modification or destruction of habitat, (3) certain characteristics or requirements make it especially vulnerable to specific pressures, (4) experienced researchers have identified other factors that may jeopardize it, or (5) it is thought to be rare or declining in Kentucky but insufficient information exists for assignment to the threatened or endangered status categories.

Historical (H). A taxon or natural community that has not been reliably reported in Kentucky since 1990 but is not considered extinct or extirpated---see next designation.

Extinct/Extirpated. A taxon for which habitat loss has been pervasive and/or concerted efforts by knowledgeable biologists to collect or observe specimens within appropriate habitat have failed. Extinct species are those that have been eliminated throughout their entire range and extirpated species are those that have been eliminated from a jurisdiction (i.e., nation or state/province).

(US) Endangered Species Act of 1973

Federal statuses are defined below. Non-breeding birds with a federal status occurring as a migrant or visitor in Kentucky (e.g., *Charadrius melodus*, *Mycteria americana*) are not included within this list.

Endangered (LE). ". . . a species in danger of extinction throughout all or a significant portion of its range .." (USFWS 2010a).

Threatened (LT). ". . . a species likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range." (USFWS 2010a).

Candidate (C). Taxa for which the USFWS has ". . . sufficient information on biological status and threats to propose them as endangered or threatened" (USFWS 2010b).

Proposed Endangered (PE). "Species proposed for official listing as endangered." (USFWS 2010a)

Proposed Threatened (PT). "Species proposed for official listing as threatened." (USFWS 2010a)

(Note: no natural communities have been assigned a federal status).

Nomenclature Sources

Sources consulted for the plant and lichen names are: Anderson (1990); Jones (2005); and Esslinger (2009). Sources consulted for the common and scientific names of animals are as follows: gastropods - Hubricht (1985); Turgeon et al. (1998) and Minton and Lydeard (2003); freshwater mussels - Gordon (1995) and Turgeon et al. (1998); crustaceans - Barr (1968); Holsinger (1972); Hobbs (1989); Zhang and Holsinger (2003); Taylor and Schuster (2004); McLaughlin et al. (2005); Taylor et al. (2007); and Buhay and Crandall (2008); insects – Hodges (1983); Barr (1996; 2004); McCafferty (1996); Stark et al. (1998); Needham et al. (2000); Westfall and May (2006); Pelham (2008); NatureServe (2010a); and Morse (2010); fishes - Page and Burr (1991); Nelson et al. (2004), Blanton and Jenkins (2008); Welsh and Wood (2008); Strange and Mayden (2009); and USFWS (2010a); amphibians and reptiles - King and Burke (1989); Collins and Taggart (2002); and Crother (2008); breeding birds - AOU (1998); mammals - Hall (1981), Jones et al. (1992), and Wilson and Reeder (1993).

Acknowledgements

We would like to extend our appreciation to the following contributors: Brainard Palmer-Ball, Jr. (Kentucky State Nature Preserves Commission, retired), Jerry and Carol Baskin, Thomas C. Barr, Jr. (University of Kentucky, Emeritus), Robert S. Butler and Michael A. Floyd (United States Fish and Wildlife Service), Julian N. Campbell, Ronald R. Cicerello (Kentucky State Nature Preserves Commission, retired), H. Carl Cook, Charles V. Covell, Jr. (McGuire Center for Lepidoptera and Biodiversity), Dan Dourson (Belize Foundation for Research and Environmental Education), David J. Eisenhower and Alan Risk (Morehead State University), Marc Evans (Kentucky State Nature Preserves Commission, retired), Loran D. Gibson, Scott A. Grubbs (Western Kentucky University), Ron Jones (Eastern Kentucky University), James D. Kiser (Stantec Consulting), James B. Layzer (Tennessee Technological University), Julian J. Lewis (Lewis and Associates LLC), Christopher Lorentz (Thomas More College), John R. MacGregor, Monte McGregor, and Matthew R. Thomas (Kentucky Department of Fish and Wildlife Resources), William Martin (Eastern Kentucky University, Emeritus), Landon McKinney, John G. Petranka (National Institute of Environmental Health Sciences), Guenter A. Schuster (Eastern Kentucky University, Emeritus), Christopher A. Taylor (Illinois Natural History Survey), Matthew R. Thomas (Kentucky Department of Fish and Wildlife Resources), and Mark J. Vogel (Kentucky Division of Water).
